An Original Look To Any Image

With The New Range Of **Globus-Visualizers**

The **Globus-Visualizer** is the most flexible presentation tool of our times. It can pick-up any kind of material (books, photos, 3-dimensional objects etc.) quickly and easily and provides a high resolution output signal for video/data projectors, monitors, interactive whiteboards or videoconferencing systems.

Compared to rather "stiff" PowerPoint presentations, a presentation with a **Globus-Visualizer** is much more flexible and "alive" because anything can be displayed at any time, with no fixed order and without any advance preparation.

The **Globus-Visualizer** enables the presenter to translate ideas into convincing interactive presentations, spontaneously and naturally, and to engage and communicate with an audience in a manner that is more effective than any other presentation method, ensuring that each and every presentation is a memorable experience for the audience.
