

## Impact Series Device Management Software MODEL: Impact-DM-20

Device Management Application	Impact-DM-20
Operating System	Mainstream versions of Windows and Android, along with Zero Day Support
Device Management	Able to manage all Interactive Displays using a common agent irrespective of device location, provide real-time reports and dashboard of Devices, applications, inventory, and users; and its associated risks/vulnerabilities against different threshold limits, able to centrally push all updates and send notifications to all devices, provide State, Division, District & Block level management of devices, provide roles-based configuration capability for administration, provide device and data level security, ability to lock and unlock the device remotely from DMS server, provide remote management to view end user device screen from a centralized Web console, able to centrally push any new firmware/application & future updates of Display, risk-based dashboard system, for categorizing different vulnerabilities with an option of agent based and agentless scanning with predictive prioritization of vulnerabilities which requires immediate action, device management and vulnerability scanning solution deployed dedicated for board and native integration capability.
Centralised Web Application	Control to manage the entire fleet of devices and scalable in future.
Security and Updates	Handle large deployment of patches/security polices/process, application etc. updates
Device management Software (provide statistics from the operating systems - (Android/Tizen/Windows/Chrome))	<ul style="list-style-type: none"><li>Remote monitoring Remote access with live remote control from DMS App, Remotely able to control volume, enable mute, control brightness, change input source of display from DMS app, Remotely able to Reboot, Power Off, Screen off, Screen lock and unlock display from DMS app, able to schedule power on and off of display from DMS app, Remote diagnosis, Remotely change booting logo and wallpaper of display from DMS server, Remotely send and play emergency message on Display screen with alert sound, Remote trouble shooting, Remote device management, Remote password/lock code change</li><li>Dashboard and reports Live running status</li><li>Option of data cloning with import and export setting data remotely from server</li><li>Live Screenshot capture and display on DMS server remotely, Recent event list</li><li>Alarm monitoring of Dashboard, Signal Light, Notification</li><li>Error notification by email with option to set threshold limit for getting alert for nature of error/issue in Display</li><li>Able to search device in DMS app through serial number of devices and Remotely able to see Model number, serial number, MAC address, IP address, Firmware version, BIOS version of display in DMS app</li></ul>
